Item response theory (IRT) is also known as modern testing theory or latent trait theory. In classical test theory, items on a scale measuring a single construct are

# Read Online Item Response Theory For Psychologists

generally considered to be equivalent to each other. IRT measures the specific characteristics of each item. An item characteristic curve (ICC) can be defined for each item.

## **Item Response Theory - Psychological Testing**

Item response theory (IRT), also known

# Read Online Item Response Theory For Psychologists

as latent trait theory or modern mental test theory; is a relatively new approach to psychometric test design. Whereas classical test theory focuses on the test as a whole, item response theory shifts its focus to the individual items (questions) themselves.

Item response theory (IRT) represents an important innovation in the field of psychometrics. While now 50 years old – assuming the “birth” is the classic Lord and Novick (1969) text – it is still underutilized and remains a mystery to many practitioners. So what is item response theory, and why was it invented?
